

THE WEBSITE ON DRAGONFLIES AND DRAGONFLY RESEARCH IN BOSNIA AND HERZEGOVINA

The website of the dragonfly research group “LESTES” (available at: <http://www.biolog.ba/odonata/>) gives information on dragonfly fauna of BiH and activities related to research and protection of these insects in the country. The “LESTES” group is section of the Society for Biological Research and Protection of Nature - BIO.LOG from Sarajevo that gathers people interested in dragonflies, their research and conservation in Bosnia and Herzegovina and the region. The main idea of the site is to present information on dragonfly-related activities of the Society, but also to serve as a source of all dragonfly information for BiH and the region.

At the website, it is possible to find basic information on biology and ecology of dragonflies, as well as papers and publications on dragonflies from BiH and the region. The site also gives all information on Balkan Odonatological Meeting (BOOM), including reports, articles and photos from all previous meetings.

Its aim is to establish connection between professionals and amateurs interested in dragonflies in the country and region, promote odonatology and support data

collecting in the country. We would like to invite you to send us interesting news on dragonflies, particularly from Bosnia and Herzegovina and the Balkans, so we could share it on the website. At the moment, the site is mostly in local language, but we plan to add the English translation soon.

DROBTINICE IN OCVRKI

Drobtinice in ocvirki so rubrika, ki je namenjena objavi posamičnih favnističnih podatkov, zanimivih opažanj in dogodkov, ki so morda "premajhni" za objavo članka, v terenskih beležnicah in naših glavah pa nanje kaj kmalu pozabimo. Zaželeni so podatki za redke in ogrožene vrste, predvsem iz območij od koder doslej niso bile znane, izjemno zgodnja ali pozna opazovanja določene vrste, notice o nenavadnem vedenju, skratka karkoli zanimivega iz tega ali onega razloga. Podatki naj bodo čim bolj natančni, zato je nujna navedba datuma, natančne lokalitete in imena popisovalca. **Prispevke prosim pošljite na naslov: Matjaž Bedjanič, Rakovlje 42a, 3314 Braslovče ali na e-naslov: matjaz_bedjanic@yahoo.com** Vljudno vabljeni k sodelovanju tudi v prihodnje!
